Zusammenfassung von JP2002357259

PROBLEM TO BE SOLVED: To realize a structure capable of transmitting a greater driving power and obtaining sufficient durability.

SOLUTION: A power circulating variable-speed drive is constituted in combination of a toroidal type variable-speed drive 30a with a planetary gear structure 31a. The toroidal type variable-speed drive 30a is a double cavity type having three power rollers 9, 9 respectively, total six, in each cavity, and has a hydraulic pressing device 36a. The pressing device 36a generates a pressing force according to the power passing through the toroidal type variable-speed drive 30a.
